

GUIDED AUGER BORING ON SENSITIVE SITE AT WIGAN, GREATER MANCHESTER

Client:

United Utilities

Summary:

Installation of 25m of 450mm steel sleeve

PROJECT DETAILS

An 85t guided auger bore machine was utilised on this contract. The main contractor required the installation of a 450mm sacrificial steel sleeve only as he intended to install the specified product pipe at a later date.

The augering process was chosen on the contract because of the sensitive nature of the surrounding area and to minimise disruption to an embankment and stream.
