

HORIZONTAL DIRECTIONAL DRILLING AT CRANBROOK

Client:

Wales & West

PROJECT DETAILS

HORIZONTAL DIRECTIONAL DRILLING

On this contract A E Yates Trenchless Solutions Ltd were contracted to carry out 2 No directional drills to install a new 10" high pressure steel gas main. One drill was 180m across a site, where we had to pass under existing services and a heating pipe line.

The other drill was approximately 60m under a road. The steel pipe was prepared on site by the main contractor, G&J Engineering Ltd, who we found to be very professional in the way they approached their work and ran the site. For these drills we utilised our American Augers DD110 50T drilling rigs as the ground conditions were unknown so the extra capacity of this machine may have been needed.

This project went extremely well and was completed within programmed time and to the satisfaction of both the Client and Main contractor.

GROUND CONDITIONS

- Clay / Mixed
