

HORIZONTAL DIRECTIONAL DRILLING AT MERSEY TUNNEL ACCESS ROAD

Client:
Mersey Travel

Summary:
Street Lighting Improvements
to Mersey Tunnel Access Road

PROJECT DETAILS

HORIZONTAL DIRECTIONAL DRILLING

As part of Mersey Travels street lighting improvement scheme on the dual carriageway that feeds the Mersey Tunnel at Wallasey, AEYTS undertook the HDD installation of two electricity cable ducts under the main access road.

Directional Drilling was Mersey Travels preferred installation method as it drastically reduced the amount of traffic management required and virtually eliminated any disruption to the flow of traffic.

The job was undertaken in a single visit and the client was extremely impressed.

GROUND CONDITIONS

- Very compact, dense sand
