HORIZONTAL DIRECTIONAL DRILLING AT RIVER FROME

Client: Western Power Distributions

Summary: New power cables being laid

PROJECT DETAILS

HORIZONTAL DIRECTIONAL DRILLING
To supply, drill and install 2No 3 way 180mm and 1No way 125mm ducts in three separate bores underneath the River Frome near Hereford.

On this project we were employed directly by Western Power to carry out these critical crossings. As well as installing the 3 separate drill shots AEY TS were also contracted to install an access road across the farmers field to minimise disruption to the crops.

This drilling was undertaken using our Vermeer D50 drilling rig, which performed excellently in difficult ground conditions. This job was completed well ahead of programme/contract period and to the clients satisfaction.

GROUND CONDITIONS
- Gravels and Mud Stone
