

LIME MODIFICATION AT HAMELDON COLLEGE, BURNLEY

Client:

Adana Construction

PROJECT DETAILS

LIME MODIFICATION WORKS

When Phase 2 of this project, a college development within the town of Burnley, was awarded to Adana Construction it was no surprise that they contact CSSL to undertake the Bulk Modification works. Along with the benefit of being a local company, CSSL also had previous experience of the site having carried out works previously on Phase 1.

Specialist Plant used by Combined Soil Stabilisation

Due to close proximity of the college building, a WR2500SK Integrated Mixer was used to control any dust issues, and working alongside Adana, CSSL completed the works on time and to the specified design.
