

## MINI PILING FOR RETAINING WALL AT STOCKPORT

### PROJECT DETAILS

#### MINI PILING AT NEW RETAINING WALL ALONG EXISTING DWELLINGS

Mini piling grout plant set up, Stockport, Manchester, where a retaining wall was required along a line of existing dwellings. Due to the small quantities of material required per pile and the restricted access a 18 ton dry powder grout silo was employed. Pre designed special piling grout was used giving strengths of 35N/mm. Mixing of the grout is undertaken in a fully calibrated screw feed mixer under the silo.
